

UreSil® Tru-Fix™ Catheter Fixation System

- The system incorporates a silicone disk, locking collar (nylon) and transparent adhesive patch
- The inherent friction of the silicone disk along with the polyurethane material in the catheter secures the catheter without occluding the lumen
- Transparent tape allows the caregiver the ability to monitor the skin condition
- The dressing can be easily changed without disturbing the wound site or dislodging the catheter
- Universal design that can be used on any brand of catheter

UreSil®
Innovative Products for Interventional Radiology

Fixation Design:

- Adjustable nylon locking ring to secure catheter in place
- Transparent silicone fixation device and adhesive patch
- Six distinct Fr. sizes (6 Fr. – 16 Fr.) to insure proper fit on all brands of catheters
- Suture holes to further secure the disk in place

Benefits:

- Device is designed to secure the drainage catheter in place without crimping or kinking the catheter shaft by applying an equal 360° pressure with the locking ring
- The inherent friction of the silicone disk along with the polyurethane material in the catheter secures the catheter without occluding the lumen
- The transparent dressing can be easily changed without disturbing the wound site or dislodging the catheter
- Transparent fixation device and adhesive tape to allow visual observation of skin condition
- Replacement adhesive patches sold separately
